DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of claims 1-4 in the reply filed on November 30, 2004 is acknowledged.
2. Claims 5-15 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected species, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on November 20, 2004.

Specification

3. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. **Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Suzuki et al. (Japanese Publ. No. 04-291576 A).**

6. Regarding *claim 1*, Suzuki discloses a clamping circuit for an electronic endoscope. More specifically, Suzuki discloses a clamping circuit which receives an image signal from a

Art Unit: 2612

solid-state imaging device. The clamping circuit receives a signal CP1, which indicates an optical black section, and a signal CBLK, which indicates a timing at which an output of the solid-state imaging elements stops. The output of the solid-state imaging device stops at CBLK since this signal represents a blanking signal. The clamping circuit further includes a variable voltage device (VR), which acts as a target value setting means which sets a target value for output and an amplifier device (16) for amplifying a difference between the target value and an optical black signal. This is fed back to the multiplier (15). The amplifier acts to match a signal level of the optical black section to a constant value by maintaining the target value of the optical black section, while the enable signal (CBLK) is activated. See Figures 1 and 3. Also see the abstract. An official translation of this Japanese publication has been ordered for use in subsequent office actions.

Allowable Subject Matter

7. **Claims 2-4 are allowed.**

8. The following is an examiner's statement of reasons for allowance:

Regarding **claim 2**, the primary reason for allowance is that the prior art fails to teach or reasonably suggest an arrangement of the optical black clamping circuit as specified in claim 2.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
